0006

Hi Tom

Was never sure that you got this picture or not. This is where the new tails repository site will be proposed and the existing bonded area in green. So the traded off is close. There will be slightly more acreage due to the outside toe of the dike, but not much.

Very Best Regards

Mark

PS. Thank for the snail paper!! My doctor is researching this new drug..

0006

MILL

NOTE: Internal storage capacity of the new Repository is slightly less than Current Disturbance that is already Bonded. By Adding The outside Toe of the New Dike the Disturbance is slightly more, only 75% will be Built & used now So Bond is more than Adequate

Existing permitted Tailings Repository

MATCH EXISTING GROUND AT ELEV. 5830

TAILINGS REPOSITORY

TOP OF DIKE ELEV. 5830

Current Proposed Tailings Repository Site

EXCAVATE THIS AREA BEHIND THE DIKE TO ELEV. 5800
